Press Release # 2/X

**SUPERBOOTH 03**

during Musikmesse Frankfurt March 5<sup>th</sup>-9<sup>th</sup>, 2003

In a long narrow tunnel filled with some of the most beautiful and authentic synthesizers in the world you will have the possibility to patch. Take a few technical rarities and friendly drinks and you have a complete experience.

Once again this year's Frankfurt Music Messe will welcome the SUPERBOOTH.

Many attractive products that are seen in the specialized music stores "still" too rarely will be presented in various combinations through headphones and speaker systems under the theme "Superpatch".

Patches are the connective element to this year's topic stand with connections being made between modular systems and synthesizers, effects and filters from known and unknown exotic foreigners. Besides a new Filterbank from Holland and a tool to connect body sensors with your midi setup you can learn how to perform an electro-mechanical spring reverb or how vacuum tube filters can sound like. Classics as well as exotic foreigners will make your visit become an adventure. Bob Moog can't come this year, but the Voyager is his worthy transporter.

More details for events and participating companies are available at [www.superbooth.com](http://www.superbooth.com).

We look forward to your active participation and your Patch!
